- Deconstructed food
- Mermaid toast
- Spaghetti bagel
- Cold-pressed juice
- Avocado burger
- Kale Soda
- Charcoal ice cream
- Extreme milkshakes
- Elevated toast
- Rainbow bagel
- Poke
- Elderflower and lime martini

Enemies

Here’s where we identify which categories and sub-categories are the biggest contributors to both the consumption footprint and territorial footprint for a community. These figures suggest that on a territorial basis, housing (mains gas and electricity), road transport, and aviation and shipping contribute most. But when it comes to the emissions that arise from what households in this community consume in their daily lives, you can see that the consumption of goods and services, food and diet and travel (flights) are the most significant.

Housing Road Transport Aviation Housing Shipping Housing Food and Diet Travel
